## DETAILED ACTION

# Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 1-4, 8-12, 16-19, 22-27, and 30-40 are allowed over the prior art of record.

Independent claim 1 is allowable since the claim recites a method of recording data, the method comprising: recording the data on an optical disc that is rotating at a predetermined constant angular velocity; determining whether a data recording error occurs due to a defect of the optical disc; and if it is determined that the data recording error has occurred, rotating the optical disc at an adjusted constant angular velocity which is lower than the predetermined constant angular velocity, and recording the data on the optical disc that is rotating at the adjusted constant angular velocity, wherein the adjusted constant angular velocity is one step or two steps lower than the predetermined constant angular velocity, according to an extent of the data recording error.

Independent claim 9 is allowable since the claim recites a method of reproducing data, the method comprising: reproducing the data from an optical disc that is rotating at a predetermined constant angular velocity; determining whether a data reproduction

Art Unit: 2627

error occurs due to a defect of the optical disc; and if it is determined that the data reproduction error has occurred, rotating the optical disc at an adjusted constant angular velocity which is lower than the predetermined constant angular velocity, and reproducing the data from the optical disc, wherein the adjusted constant angular velocity is one step or two steps lower than the predetermined constant angular velocity, according to an extent of the data recording error.

Independent claim 17 is allowable since the claim recites an apparatus for recording data, the apparatus comprising: a motor driver which controls a motor which rotates an optical disc at a constant angular velocity; an optical pickup which irradiates light onto the optical disc, detects the light reflected from the optical disc, and outputs a radio frequency signal corresponding to the reflected light; a radio frequency signal processor which, in response to the radio frequency signal, generates and outputs a recording error signal that indicates whether a data recording error occurs; and a controller which, in response to the recording error signal, determines whether the data recording error occurs, and if it is determined that the data recording error has occurred, controls the motor driver to rotate the optical disc at an adjusted constant angular velocity which is lower than a predetermined constant angular velocity, wherein the adjusted constant angular velocity is one step or two steps lower than the predetermined constant angular velocity, according to an extent of the data recording error, and wherein the controller determines whether the data recording error occurs due to a defect of the optical disc.

Art Unit: 2627

Independent claim 25 is allowable since the claim recites an apparatus for reproducing data, the apparatus comprising; a motor driver which controls a motor which rotates an optical disc at a constant angular velocity; an optical pickup which irradiates light onto the optical disc, detects the light reflected from the optical disc, and outputs a radio frequency signal corresponding to the reflected light; a radio frequency signal processor which, in response to the radio frequency signal, generates and outputs a reproduction error signal that indicates whether a data reproduction error occurs; and a controller which, in response to the reproduction error signal, determines whether the data reproduction error occurs, and if it is determined that the data reproduction error has occurred, controls the motor driver to rotate the optical disc at an adjusted constant angular velocity which is lower than a predetermined constant angular velocity, wherein the adjusted constant angular velocity is one step or two steps lower than the predetermined constant angular velocity, according to an extent of the data recording error, and wherein the controller determines whether the data recording error occurs due to a defect of the optical disc.

Independent claim 33 is allowable since the claim recites a method of recording and/or reproducing data, the method comprising: at least one of: recording the data on an optical disc that is rotating at a predetermined constant angular velocity, and reproducing the data from an optical disc that is rotating at a predetermined constant angular velocity; determining whether at least one of a data recording error or a data reproduction error occurs due to a defect of the optical disc; if it is determined that the data recording error has occurred, rotating the optical disc at an adjusted constant

Art Unit: 2627

angular velocity which is lower than the predetermined constant angular velocity, and recording the data on the optical disc that is rotating at the adjusted constant angular velocity; and if it is determined that the data reproduction error has occurred, rotating the optical disc at an adjusted constant angular velocity which is lower than the predetermined constant angular velocity, and reproducing the data from the optical disc that is rotating at the adjusted constant angular velocity, wherein the adjusted constant angular velocity is one step or two steps lower than the predetermined constant angular velocity, according to an extent of the data recording error.

Claims 2-4, 8, 10-12, 16, 18, 19, 22-24, 26, 27, 30-32, and 34-40 are allowed as being dependent upon one of aforementioned independent claims 1, 9, 17, 25, or 33.

The closest prior art by Ohta (US Doc. No. 2002/0114243) discloses lowering the rotation speed of an optical disc when an error is detected during recording. Ohta does not disclose that the adjusted constant angular velocity is one step or two steps lower than the predetermined constant angular velocity, according to an extent of the data recording error.
